

With five facilities and over 300,000 sq. ft. of manufacturing space dedicated to storage tank/silo fabrication, TC Affiliates has created the ultimate SINGLE SOURCE approach to dry bulk and liquid storage systems... and they back it with the largest support team of recognized industry experts in storage containment applications!

Another Tank Connection manufacturing facility was unveiled in December 2008. Facility manufactures the top rated “RTP” bolted tank design selected worldwide.

Corporate Description:

Tank Connection is recognized by engineers around the world as the industry leaders in storage tank/silo applications. Unlike tank suppliers that offer a specific type of tank construction, TC is the only tank manufacturer that produces all four types of steel silo construction including **Bolted RTP (rolled, tapered panel), Field-Weld, Shop-Weld and Hybrid tank construction**. The products manufactured also command the top performance ratings in the industry.

In 2007, Tank Connection added the Action Unloader™ bottom reclaim unloader (Starvrac technology) to their product line up. With over 4,500 reclaimers worldwide in bulk storage applications, this acquisition allowed TC to offer every conceivable hybrid silo configuration utilized in dry bulk storage. Hybrid silo construction is today’s “hot topic” in storage, and Tank Connection is recognized as the innovator of this new product line. Hybrid silos interface the best qualities (component pieces) of field-weld, bolted and/or concrete silo construction into one product.

“At TC Affiliates, we offer a unique advantage to our clients. We know the applications, and we know what storage silo/tank configuration will meet and exceed a customer’s requirements.” Storage tanks are mass produced, but customized per client requirements and for system integration. High quality, long life, low maintenance storage, that is cost efficient to purchase and install is today’s storage containment approach.

TC Affiliates has invested in the future of storage containment worldwide by investing in people... the recognized industry experts in storage applications. Their affiliate group has over 2,100 years of combined storage tank/silo experience between companies. This experience level is tied to tank design, tank specification development, tank fabrication, field installation and always “golden rule” customer service.

Markets Served:

Minerals & Mining, Stone & Clay, Chemicals, Petrochem, Foods, Rubber & Plastics, Power Utilities, Water & Wastewater, Petroleum, Wood Waste, Biofuels

Facilities:

Tank Connection - New 85,000 sq. ft. facility under construction for bolted RTP & hybrid tank construction

Tank Connection - 30,000 sq. ft. facility dedicated to tank/silo design and integrated storage systems

ATEC Steel - 100,000 sq. ft., state-of-the-art field-weld tank manufacturing facility

BOSS Tank - 70,000 sq. ft. facility dedicated to RTP bolted and shop-weld tank construction

TARSCO - 50,000 sq. ft. facility dedicated to field-weld construction & refinery service

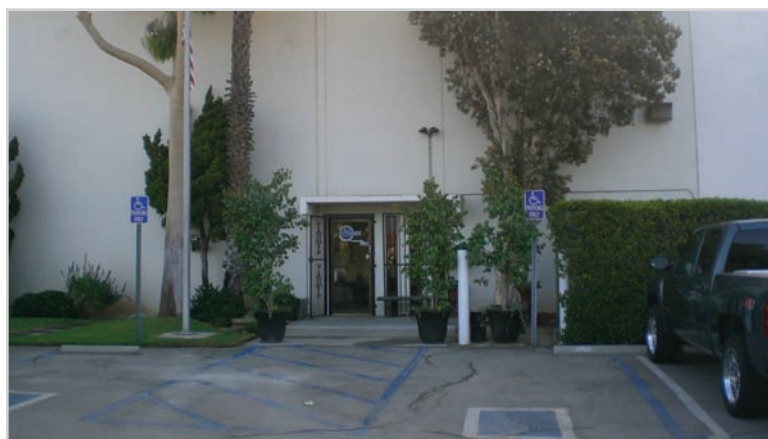

ATEC Steel - www.atecsteel.com

BOSS Tank - www.bosstank.com

Tank Connection - www.tankconnection.com

TARSCO - www.tarsco.com

Technical & Field Services

- Storage tank design
- Consultant service
- Tank inspection
- Engineering design service
- Complete engineered drawings
- Professional Engineer's stamp
- Field construction services
- "Golden Rule" customer service
- Silo retrofit & repair service

Major Products

- Bolted RTP (rolled, tapered panel) silos
- Field-weld construction
- Shop-weld construction
- Hybrid silo construction
- Power utility storage applications
- Plastic resin storage tanks & blenders
- Petrochem storage applications
- Processed food storage
- FGD applications
- Mass flow hopper designs
- Lime & limestone storage
- Storage terminals
- Petroleum & biofuels
- Water & wastewater
- Cement terminals
- Reclaim storage containment
- Planetaire reclaim unloaders
